### Assistant Professor(Sociology)

**Passage:**

The factor of geographical distribution is equally, possibly even more, significant that English is spoken as first or native language in at least four continents of the world, Russian in two, Chinese and the Indian language in one. English is without question the closest approach to a world language today. It goes without saying that no two persons ever have an identical command of their common language. Certainly, they have not precisely the same vocabulary. There are at least minor differences in pronunciation, indeed the same individual will not pronounce his vowels and consonants in absolutely identical fashion everytime he utters them. Everyone possesses, in addition, certain individual traits of grammatical form and syntactical order, constituting that peculiar and personal quality of language which we term as style. 'Style is the man.' No men are identical, no two styles are the same. If this be true of but two persons, the potential of differences resident in a language spoken by more than 200 million truly staggers imagination.

**Itemcode :** **CI1072**

**Q1 :** The author argues that English is the closest approach to a world language because
