Comprehension

Read the passage below and answer the following:

Direct taxes can be graded, not only by taking into account the size of a person's income, but also considering the use he makes of it and making suitable allowances. The proportion of taxable income may be reduced by allowances for expenses incurred on behalf of children of school age or dependent relatives or for money spent on insurance. Such a system of grading is not possible in case of indirect taxation. When you go to the cinema, the man who takes your money does not ask you how much you earn, calculate the tax incurred and charge you accordingly. So that indirect taxation is the same for all sectors of community, rich and poor alike. A drawback is that the burden of taxation on small incomes is increased, since the obvious things to tax are those for which there is a constant pronounced demand so as to make them almost necessities.

Question Description

The levels of direct tax are decided on the basis of

A

allowances for expenses on children, dependents and insurance

B

differing expenditure of the rich and poor

C

the size of a person's income

D

actual income, its use and appropriate allowances

E

None of the above
